

TREATMENT PROTOCOL SUGGESTIONS FOR RADIOACTIVITY

Ideally, you should use all 4 modules and feedback by pulse to select within the 4 modules as well as to select applicator placement on the body.

As a general guideline, I have put together an 8-session protocol for you. Ideally, you should go through 2 to 3 sessions per week, with a lapse of 48-hours between sessions. You may repeat this 8-session protocol any time.

Applicator Placement:

NA: on neck

MA: horizontally over lower back (over right and left kidneys)

HA: toward naval

Session 1: Excretion
